

Did my file share permissions carry over?

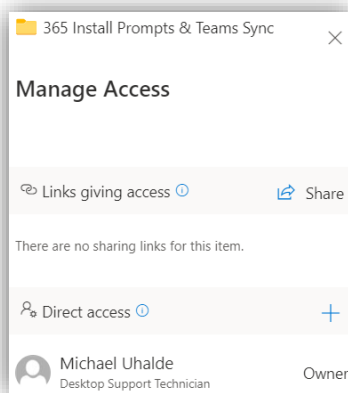

Yes! Your old Google Drive file share permissions should have all stayed intact. You can verify this by going to Office.com, click on OneDrive, and highlight a shared file or folder.

To view the share permissions of a file mouse over the file and click the 3 dots.

In the dropdown menu click, Manage access.

This will open a popup window on the right side of the screen where you can view and manage your file share settings.
